

My Git and GitHub Cheat Sheet

1. Init:

`git init`

`git clone <url>`

2. Set up:

`git config --global user.name 'Sophie Nguyen'`

`git config --global user.email 'sophiengocnguyen113@gmail.com'`

`git config --global color.ui auto`

3. Add file:

`touch <name file>`

`touch .gitignore`

4. After changing:

`git add .`

`git status`

`git commit -m 'Changed files'`

`git push`: Push to GitHub

`git pull`: All up to date

5. Different branches for group project:

git branch login: Create a new branch named 'login'

git status

git commit -m 'Changed'

git checkout login: Switch to another branch

git merge login

6. Upload to GitHub:

git remote (copy from GitHub)

git remote

git push (copy from GitHub)
